

## Installation Instructions

**IMPORTANT:** Failure to follow instructions carefully may cause product failure!

Prior to attaching the PadTab and accompanying TabClip to the appropriate surfaces, it is imperative that you determine where to place them exactly where you want them and then check to make sure both are squared. (You can use a regular level or download a level app from your appropriate app store if need be.)

The adhesive can only be used once. If you remove your PadTab Mini to relocate or straighten (*Even if briefly because it is crooked*), the adhesive must be replaced.

o Contact [info@thepadtab.com](mailto:info@thepadtab.com) for replacement adhesive

Do not let your fingers come into contact with the adhesive.

o Finger oils and other substances can impair the strength of the bond.

o Fingerprints may show through clear PadTabs.

Thoroughly clean and dry the surface where PadTab or TabClips will be installed.

o Ensure there are no leftover residues from soaps or cleaning supplies.

On all devices, center placements are recommended for best flexibility with additional TabClips.

Apply PadTab mini and TabClips to smooth, hard surfaces. PadTab is not recommended for use on:

o Device cases made of soft (TPU) or textured materials (Use polycarbonate cases)

o Textured wall or dashboard surfaces

o Wallpapered or other delicate surfaces

o (Consider using PadTab's TrnMount in such instances)

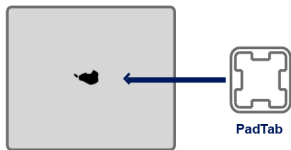

PadTab can be used immediately after installation; however, it may take up to 72 hours for the adhesive to cure and the air bubbles to be released. For best results; do not leave device mounted for more than 24 consecutive hours to prevent system failure by static creep.

These components use a strong industrial grade adhesive, and may cause damage if not removed via the specific instructions provided. Please refer to the "Removal" instructions later in this document or refer to [www.thepadtab.com](http://www.thepadtab.com) for more info.

The use of PadTab products is entirely at your own risk. Under no circumstances, including but not limited to, negligence, shall PadTab be liable for any direct, indirect, or incidental, special, or consequential damages that result from the use, misuse of, or the inability to use, the PadTab product. **Maximum weight limit for this system is not to exceed 2.5 lbs.**

## How it works

Attach the PadTab to the back of the iPad/Tablet PC

Back of iPad or Tablet PC

Adhere TabClip to any cabinet, door, refrigerator, wall, or other surface

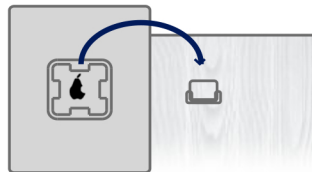

TabClip

### PadTab:

1. Lay device face down on a clean solid surface. Clean and thoroughly dry the back of the device.
2. Determine the center of your device. You can mark it with a piece of tape or sticky note, etc to create a square reference point.
3. Remove the four red adhesive backing strips. (Tweezers are recommended)
4. Slowly place the PadTab onto the center of your device making sure it stays square to your reference point.
5. Press slowly and firmly for about 30 secs, slowly working the air bubbles out. If some air bubbles still remain, they should work their self out over the next 72 hrs. Be sure to work out as many air bubbles as possible as air bubbles indicate where the adhesive hasn't bonded to the device's surface yet.

Slide Pad-Tab mounted iPad/Tablet PC onto TabClip

### TabClip:

1. Select a flat, non-textured surface (Wallpaper is NOT recommended) that is perpendicular to the floor (glass mirror, cabinet, refrigerator, etc.) Clean and thoroughly dry the surface area.
2. Use a traditional level or a level app from your appropriate app store and place the TabClip onto the surface and check if its square. After it is square, use a piece of tape or sticky note to mark where to place the TabClip assuring that your temporary marker is square as well.
3. Remove the red adhesive backing strip. (Again, Tweezers are recommended)
4. Press slowly and firmly for about 30 secs, slowly working the air bubbles out. If some air bubbles still remain, they should work their self out over the next 72 hrs. Again, Be sure to work out as many air bubbles as possible as air bubbles indicate where the adhesive hasn't bonded to the surface yet.

### Removal:

1. For damage-free removal use a hair dryer set to warm or hot and blow hot air on the device for 30-60 seconds.
2. Immediately twist the components before gently pulling off the surface
3. You may need to repeat steps 1, and 2 as necessary if the adhesive starts to cool off.
4. Carefully scrap remaining adhesive off the surface.
5. Please visit [www.thepadtab.com](http://www.thepadtab.com) for a video demonstration on how to do this

# Want a FREE set of TabClips?

\$9.99

1. Send us a picture of your newly mounted device using a PadTab brand product.
2. Sign up for our newsletter at [www.thepadtab.com](http://www.thepadtab.com)

We promise not to send you emails often but would like to let you know about new products and offers in the future.

### THE FINE PRINT!

1. By sending us a picture your giving us permission to post it on our Facebook page, website, Pinterest, Instagram, anywhere we may want to show off your newly mounted PadTab device.
2. Email us your picture to: [info@thepadtab.com](mailto:info@thepadtab.com) along with your name, address, and order # so we can ship your free TabClips. We will pay for the postage!
3. One free set of TabClips per household. We reserve the right to modify or cancel this promo at any time.
